Digital Portfolios: "Capture Students' Learning Story" *

Google Sites
Schools using GSuite have access to Sites for students to use. A student-created site can be shared with teacher, does not have to be made public/searchable, is very easy to use, and many items are already in a student's Google Drive.

AdobeSpark Pages
AdobeSparkEDU offers a tool for building websites. Very user-friendly, with a variety of layouts and features to support uploaded projects, images, video, writing, and more.

Weebly
Offers a free version to educators; easy to use; maintain privacy; similar functionality and features as Google Sites

These and other tools make it easy to communicate and demonstrate learning and growth, whether in a face-to-face or virtual setting.

DIG DEEPER: A digital portfolio is more than grades/scores. It's a student's learning story. (Renwick, 2017.)
**Renwick, M. (2017). *Digital portfolios in the classroom: Showcasing and assessing student work.* ASCD.

A digital portfolio can help establish a positive digital presence.*
